Detailed Action

- CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.
- Claims 22-51 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The recitation in the claims of (i) 0.0001%-50% wt. surfactant (page 3); (ii) propellants being P-134a or P-227 (page 4); (iii) the fluorocarbon polymers being PTFE, PE, PFA, ETFE or PVDF (page 4); (iv) the drug particle size being less than 100 microns (page 5); (v) 0.005-5% wt. drug (page 5); and (vi) 10u-50u coating thickness of the fluorocarbon polymer are features that are critical or essential to the practice of the invention, but are not included in the claim(s). Hence, the claims are a not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The above-mentioned limitations are not preferred embodiments of the present invention but are critical limitations. Hence, in the absence of the above limitations, "undue experimentation" would be required by the ordinary worker to practice the claimed invention. Claims are read in light of the specification, and the claims in this case are not commensurate in scope with the specification in the absence of these limitations.

Art Unit: 1619

3) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness

rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Page 3

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of

this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the

time the invention was made, owned by the same person or subject to and obligation of assignment to the same person.

This application currently names joint inventors. In considering patentability of the claims

under-35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was

commonly owned at the time any inventions covered therein were made absent any evidence to

the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor

and invention dates of each claim that was not commonly owned at the time a later invention was

made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35

U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 22-51 are rejected under 35 U.S.C. § 103 as being unpatentable over Evans et al.

(USP 5,261,538) and Gennaro.

Evans et al. disclose a MDI which contains the claimed drug aerosol formulation (see

claims, abstract).

Gennaro discloses that aerosol containers are routinely coated with organic materials on

the inside of the container (page 1670). The cited art lacks a specific disclosure of the

Application/Control Number: 09/506,838

Page 4

Art Unit: 1619

fluoropolymers claimed. The use of surfactants in MDIs is conventional. All ingredients of the claimed aerosol are well known in the drug aerosol art. Hence, it would be prima facie obvious to one of ordinary skill in the art at the time of the invention to coat the inside of the MDI of Evans (that contains the claimed aerosol) with a polymer such as Teflon and obtain the claimed metered dose inhaler. The motivation to do so arises from the fact that (i) Gennaro clearly discloses the use of such organic polymer coats (plastics; epoxy; vinyl and phenolic resins) in MDIs; and (ii) such coats are routinely employed in the drug aerosol art to reduce adhesion of drug particles to the inside of the container. Hence, both the suggestion and the reasonable expectation of success in this case is found in the prior art cited.

Furthermore, note that "substantially free of surfactant" does not exclude the presence of a surfactant from the claimed aerosol. Combination of different classes of drugs in aerosols is <u>not</u> novel. The claimed MDI is conventional.

Note that: (i) the cited art is analogous because it pertains to the field of the inventor's endeavor and is also reasonably pertinent to the particular problem with which the inventor is involved. *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992); (ii) a comprising-type language does not exclude other steps, elements or materials. *Cues Inc. vs. Polymer Industries*, USPQ2d 1847 (DC ND GA 1988); (iii) it is well established that the claims are given the broadest interpretation during examination; (iv) a conclusion of obviousness under 35 U.S.C. 103(a) does not require absolute predictability, only a reasonable expectation of success; and (v)

Application/Control Number: 09/506,838

Art Unit: 1619

references are evaluated by what they suggest to tone versed in the art, rather than by their

specific disclosure. In re Bozek, 163 U.S.P.Q. 545 (CCPA 1969).

In light of the foregoing discussion, the Examiner's ultimate legal conclusion is that the

subject matter defined by the claims would have been obvious within the meaning of 35 U.S.C.

103(a).

Any inquiry concerning this communication or earlier communications from the examiner (4)

should be directed to Mr. Raj Bawa whose telephone number is (703) -308-2423. The examiner

can normally be reached on Tuesday-Friday from 7:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Diana Dudash, can be reached on (703) -308-2328. The fax phone number for the organization

where this application or proceeding is assigned is (703) -305-3592.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) -308-1235.
